WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

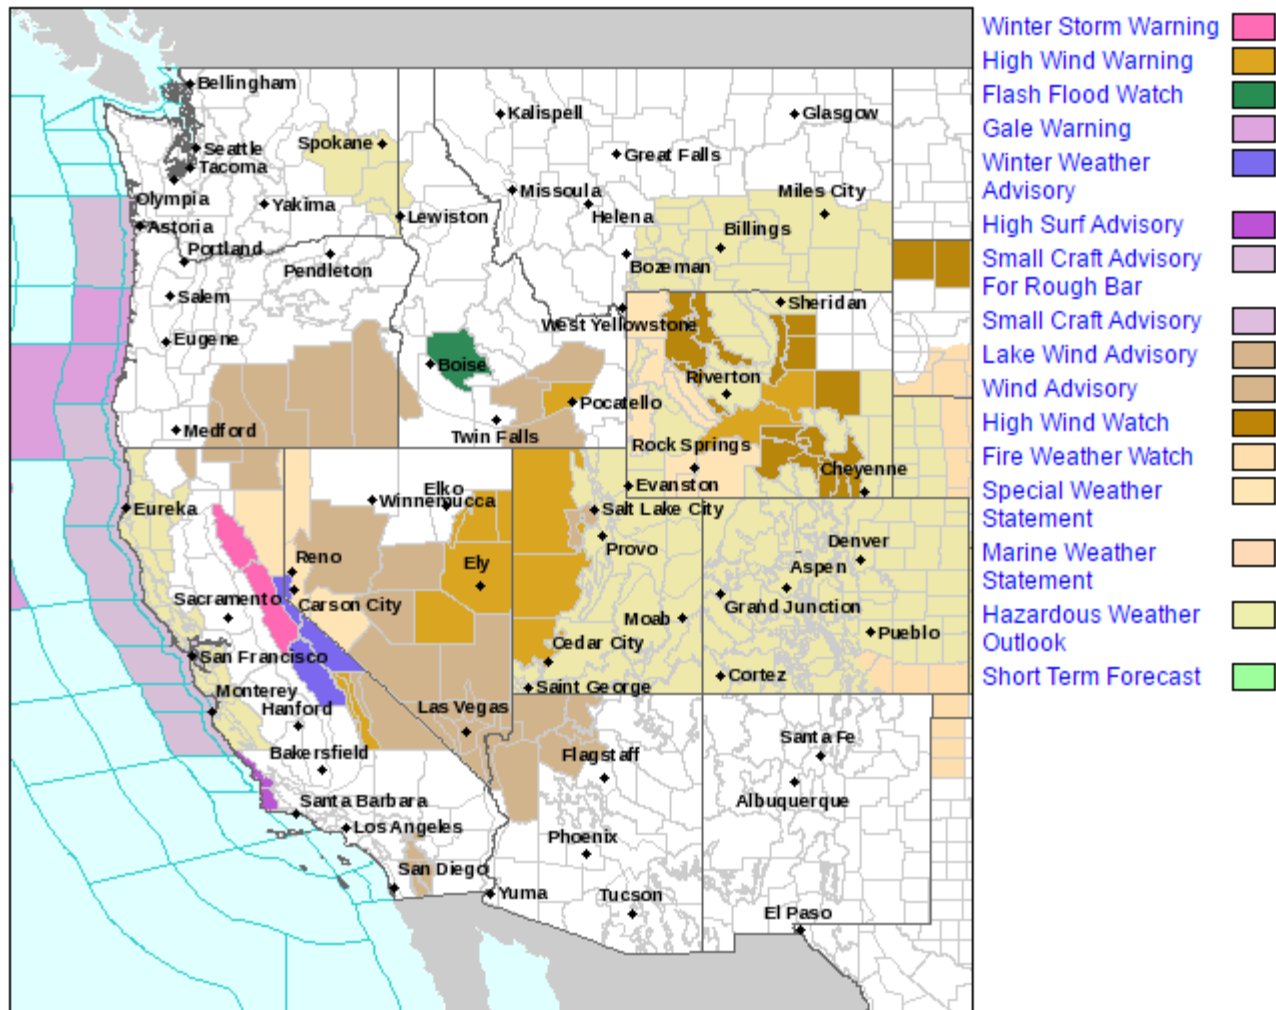

A storm system continues to bring moderate to at times heavy rain to Northwest California this morning. Rain will decrease to showers through the day with isolated thunderstorms possible this afternoon. More rain is forecast for Monday with the majority of the precipitation to accumulate by Monday evening. A colder Pacific storm will move inland today bringing widespread precipitation, breezy to windy conditions, and snow over the higher elevations above 6000 feet. Snow could be heavy at times this afternoon into the evening, leading to hazardous travel and delays over mountain passes. Afternoon thunderstorms, which may produce small hail, are possible today from Shasta to Sacramento Counties and eastward into the foothills. Another storm follows for later Monday into Tuesday. Strongest winds in the Central Valley expected midday into the afternoon.

SOUTHERN CALIFORNIA

A Pacific storm moving into Northern California will bring scattered showers away from the deserts through this evening with most locations expected to receive less than a quarter inch of rainfall. However, the Sierra and its surrounding foothills will receive between 1 and 2 inches of rainfall. Southerly winds of 20 to 30 mph with gusts to 50 mph will surface across the mountain ridges and desert passes through this afternoon. A weaker storm will move into Northern California bringing a few showers from a Monterey/Fresno County line northward Monday afternoon through Tuesday morning. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the wind prone areas tonight through Tuesday afternoon. Maximum temperatures will be in the upper 40s and 50s across the mountains and 60s to low 70s in the valleys through Tuesday. A strong ridge of high pressure will build into California from the Pacific Ocean bringing a significant warming trend Wednesday through Friday. Temperatures will approach 90 degrees over the warmer valley locations of Southern California by Friday. This ridge of high pressure will also cause widespread minimum humidity to fall into the single digits and teens Wednesday through Friday. There will be northeast to east winds of 15 to 25 mph with gusts to 40 mph across the mountains and below the canyons and passes of Southern California Tuesday night through Friday morning.
